META DUO

Meta DUO is the world first system, combined with Electroporation and RF in one device and one probe. Electroporation is the most efficient transdermal delivery method and Bipolar RF (Radiofrequency) is just right for skin tightening and facial rejuvenation. Both fantastic functions can be easily selected by a simple operation. A probe is revolutionarily designed to have the positive and the negative on insertio of its surface, so it doesn’t require a ground or a patch.

**Features**
- 2 Functions in one device:
- cost effective
- Power control: 1 – 16 Levels
- Pre-set timer
- Electroporation: 10 mins, RF: 15 mins
- Compact & light for convenient use
- Ergonomic Handpiece design (rubber for non-slip)
- Easy to control between 2 functions
- Safe to use: Heat test complied
- 1 Year Warranty for body
- 6 Month for handpiece

**Specifications**
- Power: 100-240V~50/60Hz 2A
- Frequency: RF:0.5MHz, Elect: -3.0KHz
- Size: 209 X 200 X 87 (mm)
- Weight: 1kg

META DUO

Electroporation + Bipolar RF in ONE device

**Electroporation**
- Transdermal Delivery System
- Simple to use: one probe without earth
- Various effects by different active ingredient: skin tightening, Rejuvenation, Acne, Hair loss.

**Mechanism of Electroporation**
Electroporation is a phenomenon induced by the application on a biological surface of an electrical impulse capable to gene-rate “Electro pores” inside the lipidic bi-layer of the cell membrane.

**Bipolar RF**
- Emission of Electromagnetic waves
- Bipolar system
- Skin Rejuvenation: skin tightening & wrinkle reduction

**Effects of RF**
Tightening, Vascularization, Thermal Effects

Bipolar RF

The handpiece of MetaDUO is designed to have 2 electrodes convey the energy into the underlying tissues. They are applied to the area to be treated and the propagation of the current is limited to the area between the electrodes themselves. Bipolar systems ensure a better controlled distribution of energy, and the patients treated with MetaDUO tolerate the session with ease.

Monopolar  Bipolar
